As the men do, even with their
selves, everybody would laugh at them.
Others are clear in another way, that
they are out, by being, that all they
are in this world are brag on, in
trifles and clothes, and you never
see, standing at the corner of
a street with a twenty-six inch face on
a sun-banker had run up, and
their money with him.

And upon this essay, I will cum
stop, by concluding, that if hor-
rible and terrible, and not
ending prematurely with their jaw-
line might be guilty of less wis-
dom more charity.

And I can't alter bug nature, without
giving it for anything else, any

TEST METHODIST SIMPLICITY was followed at the Weaver-Stimpson wedding at Philadelphia, which was held by the attendance of the unit, was a grand affair and attracted a very large concourse of spectators.

The ceremony was performed by Bishop James in the Twentieth century church. There were five bridesmaids and groomsmen, the former in white organdie, with ruffles, and long trains. The bridesmaids' dresses and the sashes were of the

material, without relief, each of
lilies wearing handsome illusion
and wreaths of orange blossoms.
Simpson wore a plain white cor-
set, with long train, skirts perfect-
ly *à la pompadour* waist trimmed with
lace, long white illusion veil,
of orange flowers, and orna-
ment of pearl. She leaned on the
arm of her father, Rev. Bishop Simp-
son, while the groom attended Mrs.
Simpson, who was attired in a silver-
laine. The President wore a
dress coat with velvet collar
and cuffs; black vest, cut low, with
collar and white necktie. Mrs.

wore an elegant blue silk, enfolded with white flowers, black lace diamonds and garnets. The brazier was profusely decorated with orange, bearing rich golden fruits, a variety of rare exotic plants in full bloom, cages of singing birds, and an array of living fishes. The brazier was recipient of presents valued by thousands of dollars, including a grand parrot organ, caskets, tapestries, whole services of solid silver, some six dozen silver spoons, silver, table linen, silver pitchers, vases, oyster tureens and salvers, silver cake and fruit knives,

napkins, toilet sets, medicine
bottle, rings, pearls, paintings,
basket, glass, and silver, ware of
all kinds and construction, with
other articles, making over
valued in number, and being a
rare collection. In addition
to these, several checks were drawn.—
The happy pair will depart for Italy
where Mr. Weaver received a
ship as a wedding gift from the
gent.

the city received from a neighborly by express, a box containing a quantity of granulated sugar and a number of oranges. The man at first thought it to be an agreeable surprise to his kind friend. In examining it, however, his wife discovered the oranges had been punctured. The husband, a Jew, a Jew and a Christianman conveyed a portion of the oranges to a scientific chemist, stating the circumstances and requesting an analysis. The chemist proceeded with the necessary process and discovered in about one ounce of the sugar of strychnine was sufficient to kill five men.

—order of a whole family by poison.
—teaspoonful in a cup of tea
—effort should be spared to ferret
—a monster who could be guilty of
—like this.—[Portland Argus.

"And was there, and I took a woman
me and we went and looked in."
"Your husband there?" pursued
"Yes, sir."
"And you go inside?"
"No, sir; but my husband saw me,
and came up to our own room,
and beat me and smashed the trun-
ket."
"That was not a proper place for her to
smash up the husband."
"That was a proper place for you I sup-
pose."
"My place is proper for men."
"Do you really think so?"

ell. then, I'll send you to the Pen-
ary for three months."

Agricultural

A Word About Beef.

The country, our part of it at least, seems to be in a market for slaughter. The result is, that a great quantity of unfatted beef is priced into the market. Down goes the price and many a loss is pocketed as the result. If our farmers would exhibit a little less haste, holding on to their animals until the freezing season fairly sets in, they would be largely the gainers thereby. Then beef cows put into the market early, are rarely ever fat, and poor beef never commands a paying price, while fat beef never, early or late, goes a begging for purchasers. Then hold back the beef creatures, and above all, see that they are fat before going into the market with them. It will pay.

There is another aspect of the case which farmers are apt to forget, and that is, that in no way can they so profitably work up the carcasses of the farm and convert them into marketable ones, and not impoverish their soil, as by feeding those products to their cattle. The better way to market the potatoes, turnips, squashes, pumpkins, and indeed, the barley and oats, is to sell them in the form of butter, cheese, beef, tallow, mutton, wool, poultry and eggs. The farmer adopting and pursuing this course, will find his farm "running out" or himself pinched for money to pay his taxes. While on the other hand, it is as certain, as that two and two make four, that those who pursue the opposite course do find their farming to be an up-hill business.

What We Think of It.

We have just received a copy of the Address delivered before the Maine Agricultural Society by Geo. E. Brackett, Belfast. It is a sound, practical, common-sense paper, devoid of all that sham, shoddy and soft-soap which is "spiced on our fairs" by professional lecturers at our clubs. The address is in plain, expressive English, the ideas are well linked, and better than all, it is not a mere bundle of abstractions, but contains just that kind of fact which nourishes the mind of the genuine farmer.

Nutritive Value of Different Crops.

100 lbs. of hay is equal to 275 lbs. of beef, carrots, or Jerusalem artichokes; 200 lbs. of grain, or potatoes; 125 lbs. of wheat, or 60 lbs. of groats or oats.

The above paragraph is only one of the estimates paraded before the eyes of the reading farmer which admirably serve one good purpose to mislead and deceive.

There are so many conditions attendant on such calculations, and so many analytical comparisons, that little or no reliance can be placed upon them. Then it will be found upon examination that almost every test gives a certainty of result. When it can be determined with accuracy what are all of these conditions which influence the nutritive value of hay, some value will attach to such comparisons, and until then, such estimates are more or less spurious.

Disaster in the Indian Ocean.

Week of Ship J. P. Whitney. Thirty-Three of her crew lost.

NEW YORK, Nov. 1. A letter from Bombay, Sept. 29th, gives a sketch of the fate of the ship J. P. Whitney, during a storm in the Indian Ocean, on the 8th of April. Thirty-two of the crew perished. The captain and eight others were saved. The ship was wrecked on a small island with a high, steep, and precipitous shore, and twelve days of intense suffering from want of food, they reached a group of islands where they were kindly received, and remained until a ship was sent to fetch them.

The J. P. Whitney was a ship of 200 tons, built in 1855, and was put under the British flag. She belonged to Calcutta, and was owned by R. M. Alister.

Legal Notices.

THE BLACK BEETLE. You will sometimes find in your fields a large beetle, beetle wearing upon its broad back rows of most brilliant golden dots. Know that it is not to be destroyed. According to Dr. Fitch, the distinguished entomologist, it is a pest of the corn grub, and it is not to be destroyed. It is a pest of the corn grub, and it is not to be destroyed. It is a pest of the corn grub, and it is not to be destroyed.

The Care of Lamps.

A good lamp of good kerosene gives a light so fine and steady that those who live in the country need not regret the absence of gas. It is true that the care of lamps takes a little time, while gas is always ready to be had by turning the stop-cock. By a little system and a few simple contrivances the labor of taking care of lamps is reduced to a trifle. In trimming the wick, do not use scissors, but simply scrape off the charred crust with a knife. A little practice will enable one to leave a perfectly smooth edge to the wick, and a small file will remove the charred crust, and when enriched by the deodorized substances, forms an excellent mantle.

Disinfecting Powders and Deodorizers.

There are many kinds of disinfecting powders for use in stables and privies, carbolic acid, charcoal, chloride of lime, plaster, coppers, and many other materials, are frequently used for this purpose, one of the best of all disinfectants is a surface soil that lies at every man's door, made of thoroughly air-dried, and sifted through a coarse sieve, to remove sticks and pebbles. It is cheap, easily obtained, and when enriched by the deodorized substances, forms an excellent mantle.

The Temperature of the Soil is Affected by:

First, the exposure of the surface; second, the nature of the soil; third, its permeability by rain, and the presence of underground springs; fourth, the sun's declination; fifth, the elevation above the sea, and consequently the heating power of the sun's rays; sixth, the amount of cloud and sunshine.—J. D. Hooker.
